

Sustainability, waste management, and social responsibility practices within the context of food safety management systems

Program

The aim of this webinar is to explain the key principles of integrating topics in sustainability, waste management, and social responsibility into already present food safety management systems. Therefore, highlighting practical approaches for aligning daily operations with certification systems' expectations.

Agenda:

- Introduction to sustainability in food safety management systems (FSMS)
- Environmental impact and waste generation in food industry operations
- Connections to the climate change
- Linking sustainability and social practices with food safety standards and audits
- Examples of good practices and typical areas of concerns
- Q&A and discussion
